

What is your biggest concern about the role of GenAI in higher education?

1. **Loss of critical thinking and academic skills**

Many students fear that GenAI could erode basic academic competencies such as critical thinking, writing, and research, by encouraging over-reliance.

(n=13, 41.9%)

2. **Privacy and data concerns**

Several responses highlight issues around the collection and usage of personal data, content privacy, and surveillance-like implications of AI use in education.

(n=6, 19.4%)

3. **Ethical concerns and regulation**

Concerns include ethical use of data, lack of regulation, AI's ecological impact, and biased or poisoned training data.

(n=6, 19.4%)

4. **Student fraud and academic dishonesty**

Students worry about others using AI to cheat—e.g., having AI write essays or take tests—without genuine learning.

(n=5, 16.1%)

5. **Misinformation and AI hallucination**

Several respondents mention worries about GenAI providing false or misleading information, especially due to unverified or biased data.

(n=5, 16.1%)

6. **Loss of human creativity and originality**

AI could homogenize thinking and reduce students' capacity for original, creative work.

(n=4, 12.9%)

7. **Dependency on GenAI or Big Tech**

Concerns that students, teachers, or institutions will become overly dependent on AI tools or dominant tech corporations.

(n=4, 12.9%)

8. **Job displacement and role of educators**

Some respondents fear that AI could replace human educators or researchers, reducing opportunities for meaningful human involvement.

(n=2, 6.5%)
