Humans and the Environment (Netherlands-Myanmar)

A fourney from Fear to Protection - Lynn in a small village which was located for into the deeply countryside of Meanwar, an arrestor the allignes who have seen the existence of life for more than the count of line was an observer who shoul silently as the villagers performed their decruer and event through the certical convern. One fateful due, the peace of the village was shuttered many young boy was buttern by the strue dog which is matheod rables virus. The villagres, driven by areas and the nearest Inspital was an hour meay. There also was a rural clies has nubuly wants to an to the clinic because they flought that the vaccination would not be better than traditional methods. The hor's purests chose to seek the help of a traditional heater. transling in age-old remodus unde from local points. The wise aucestor now all the scenes and heured their decision. He abse understood the pertions nature of values and inadequacy of transformal remedies in comparing such a deadly varia. With the heavy heart, he real and that it was the time to act, to teach and to protect the future of the village. He transformed loss a young physician, the came to the villege and be acted as if he were in serve for the rural clinic. As seen as he arrived, he took the boy's to the rural clinic and vaccinated him tie aburbal. "You need to minister your sor's condition". The next day, the physician gathered all the Allagors and apole about the necessity of rables curvination for both humans and minuls be also noted them have rabies could be prevented by controlling the strue dog population and ensuring that all the does received the appropriate vaccinations. He further warned that 'In my life. I had seen none of the traditional method could cure the rables. You shouldn't believe sefustover the header said. The villagers confin't easily accept his words, So, the ancestor decided to stay as a physician for a year to educate the villagers. However, our thing that good for falm was the buy who was hitten completely recovered in a few weeks, the villager started to accept his words. After a year, the village transformed. The villagers well informed about the

dangers of rables and knew how to protect their community. They also varcinated all the dots in the village including the stray dog. The once-feared disease was now under control the
